WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*Some periods of gusty winds and low RH for the higher elevations and east of the Cascade/Sierra crest this week, but probably not quite reaching High Risk category of Significant Fire Potential

The weather pattern over the Northern California region is changing now as a large low pressure trough takes over, and this week will generally be cooler and remain quite dry. Cloudiness ahead of one small weather system caught up in the trough will be streaming overhead today into Tuesday. The marine layer near the coast continues to be deep enough (~2000-2500 ft) for low clouds and fog to persist much of the day and push inland quite a bit overnight especially. Areas of immediate-coast overnight and morning drizzle may continue as well. The small weather system is currently off the coast and will be moving ashore and inland late tonight and Tuesday. Some cloudiness will continue over much of Northern California especially western and northern areas. There will be a very slight chance of some showers in the western areas, mainly north of a Point Arena to Alturas line later tonight and Tuesday and not reaching wetting rain amounts. After Tuesday, the rest of the week through the weekend looks dry with any substantive precipitation to our north. There will, however, be some gusty southwesterly winds at times with low afternoon relative humidity (RH) across our higher elevations and east of the Cascade/Sierra crest. Gusts of 25-35 mph and locally to around 40 mph will be possible. RH values are expected to increase Wednesday and Thursday, however. High Risk Significant Fire potential conditions are not expected at this time. Low afternoon RH inland (8-15%) and rather poor overnight recovery particularly on the mid and upper slopes (30-45%, locally lower) will also continue into mid week before we see much change. Our warmest inland valleys will be in the low and mid 90s this week which will be somewhat below seasonable at times.

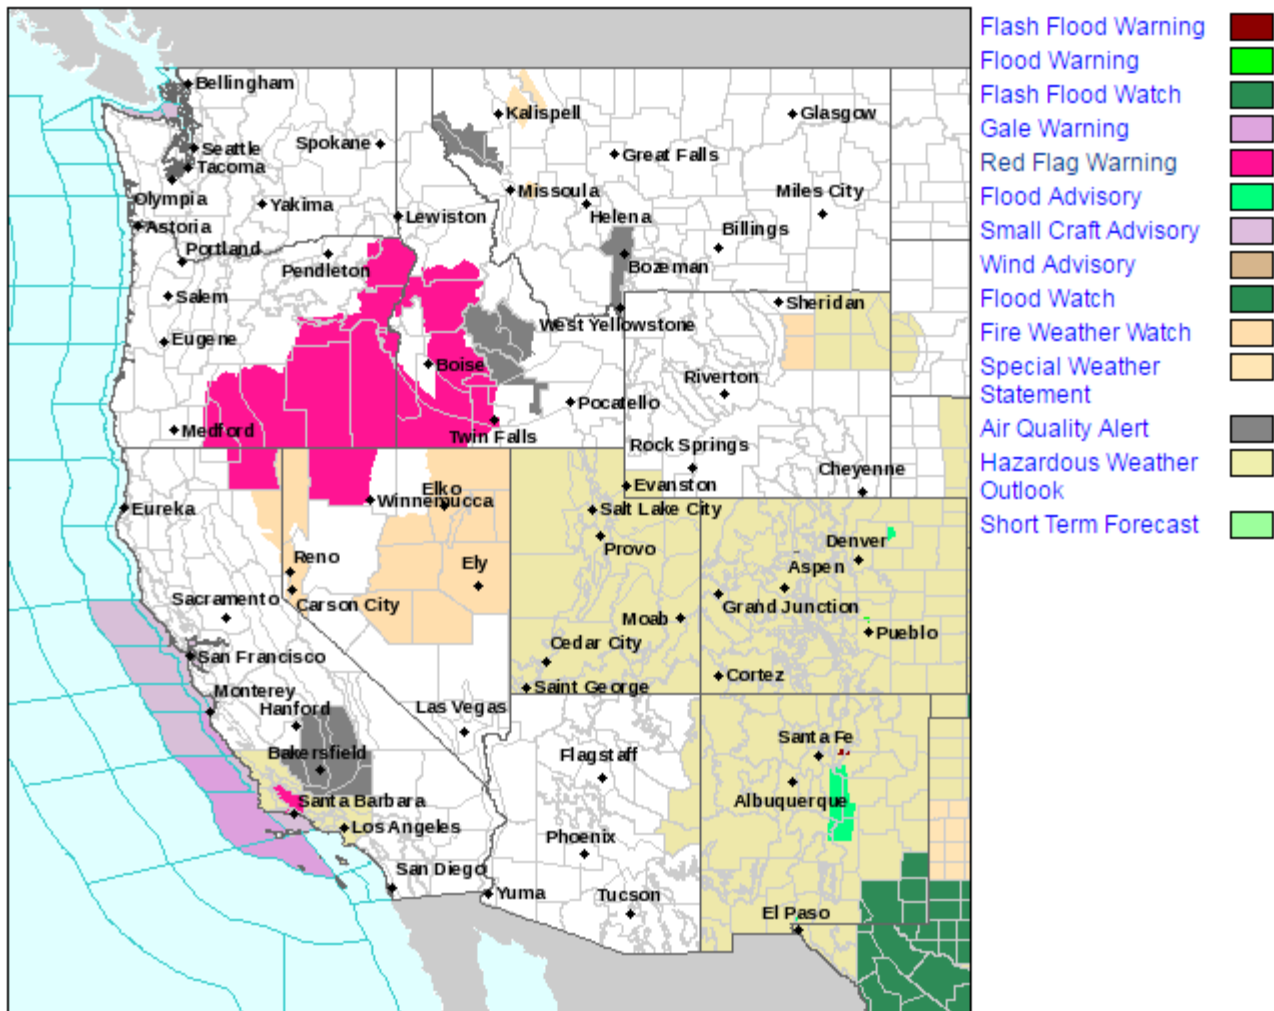

SOUTHERN CALIFORNIA

Hot and very dry through Tuesday, windy and dry across the mountains and deserts Wednesday through Saturday

High pressure centered off Southern California will bring hot and very dry conditions away from the coast through Tuesday. Maximum temperatures will be 5 to 10 degrees above normal, with mid 80s to mid 90s across the mountains and mid 90s to 105 in the valleys. Minimum humidity will be mainly in the single digits and teens. There will be local northwest to north night winds of 15 to 25 mph with gusts to 40 mph from the Santa Ynez Mountains eastward to the I-5 Corridor and across the Tehachapi Mountains through Tuesday. Winds will switch to the south and southwest and become a little stronger and more widespread across the mountains and deserts Wednesday through Saturday as a Pacific trough deepens over the West Coast. This trough will also bring a cooling trend to the entire area and a deeper marine layer along the coast Wednesday through this weekend. Morning low clouds and fog will make it over the lower coastal mountain slopes by Friday. Humidity will remain low above and inland from the marine layer influence Wednesday through this weekend.
